

FEATURES OF IT SECURITY CONSULTANCY

IT Security Consulting brings a wealth of benefits to your company. No matter how big or small, the security of your company data and infrastructure is incredibly important. The Internet holds a tremendous amount of sensitive information, not only for businesses, but also for private users. Hackers and cyber criminals pose a great risk with their skills, so you need the right IT consultant at your side.

by  troinet

1

FREE ANALYSIS

Free in-depth analysis of outdated and vulnerable IT infrastructure. Get a comprehensive report, performance metrics, and a quick action plan to fix and prevent cyber threats.

2

24/7 AND PROACTIVE

24/7 protection without compromise. Get time-tested techniques to keep your business secure from any threat. Multiple layers of security make it harder for hackers, viruses, and malware to break in your system.

3

MANAGE WHEREVER

Keep on eye on data, security and IT administration, and agentless security visibility with our unified security dashboard: All your necessary data can be analyzed in real-time. You can also scale and manage all of your passwords, deploy multifactor authentication across thousands of users, view any user or device activity in near real time, and keep all team members safe.

4

PREVENT EMPLOYEE-THEFT

Keep Your Business Data Safe: There are too many possible indirect ways to leak data. The more trusted the employee, and the more sensitive the corporate data he is dealing with, the higher chance that your company will suffer a huge blow when they leave your company.

5

SAVE TIME

IT security takes way your hours or days, but there are things you can do: Hire someone else to do it for you. Outsourcing is a way of getting things done for less money.

6

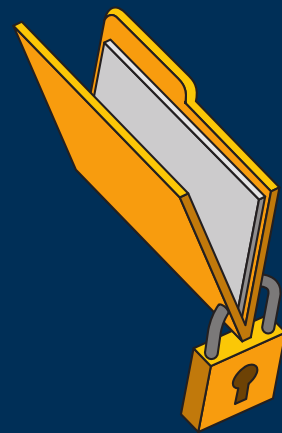

GET BACK ASAP

Having a good security incident response plan enables you to move quickly following an intrusion. However, if you're relying on too many people to make your plan work, you can be hamstrung if something goes wrong. Good preparation means you or your IT provider have done the legwork before things go wrong, so that if something does happen, you are ready to deal with it quickly.

7

BACK UP IN MULTIPLE PLACES

Wrap cloud services around your backup repositories to reduce costs, increase security and availability, enforce valid retention policies, and more.
